The TM 31-210 Improvised Munitions Handbook is a United States Army technical manual intended for the United States Special Forces describing manufacture of improvised weapons and explosives from readily available materials, from junk piles, common household chemicals and supplies purchased from regular stores. The Improvised Munitions Handbook is one of the best references on how to manufacture improvised explosive devices. It was first published in 1969.

In Unconventional Warfare operations it may be impossible or unwise to use conventional military munitions as tools in the conduct of certain missions. It may be necessary instead to fabricate the required munitions from locally available or unassuming materials. The purpose of this manual is to increase the potential of Special Forces and guerrilla troops by describing in detail the manufacture of munitions from seemingly innocuous locally available materials. Manufactured, precision devices almost always will be more effective, more reliable, and easier to use than improvised ones, but shelf items will just not be available for certain operations for security or logistical reasons. Therefore the operator will have to rely on materials he can buy in a drug or paint store, find in a junk pile, or scrounge from military stocks. Also, many of the ingredients and materials used in fabricating homemade items are so commonplace or innocuous they can be carried without arousing suspicion. The completed item itself often is more easily concealed or camouflaged. In addition, the field expedient item can be tailored for the intended target, thereby providing an advantage over the standard item in flexibility and versatility. The manual contains simple explanations and illustrations to permit construction of the items by personnel not normally familiar with making and handling munitions. These items were conceived in-house or, obtained from other publications or personnel engaged in munitions or special warfare work. This manual includes methods for fabricating explosives, detonators, propellants, shaped charges, small arms, mortars, incendiaries, delays, switches, and similar items from indigenous materials.

You don't need to be a trained soldier to fully appreciate this edition of IMPROVISED MUNITIONS BLACK BOOK. Originally created for soldiers in guerrilla warfare situations, this handbook demonstrates the techniques for constructing weapons that are highly effective in the most harrowing of circumstances. Straightforward and incredibly user-friendly, it provides insightful information and step-by-step instructions on how to assemble weapons and explosives from common and readily available materials. Over 600 illustrations complement elaborate explanations of how to improvise any number of munitions from easily accessible resources. Whether you're a highly trained soldier or simply a civilian looking to be prepared, the IMPROVISED MUNITIONS BLACK BOOK is an invaluable addition to your library.

Originally created as a U.S. Army Technical Manual, this ebook provides detailed explanation of manufacturing munitions from seemingly innocuous locally available materials. Primarily intended to increase the potential of Special Forces and guerrilla troops, "Improvised Munitions Handbook" represents perfect reading for all arms enthusiasts, as well as civilians considering their safety. This edition offers simple instructions, enriched with a large number of illustrations, on various techniques for constructing many different weapons and devices made of materials that can be bought in a drug or hardware store or found in a junkyard. The instructions are presented in a way that even people normally not familiar with making and handling munitions can use them.
