You might have heard of the basilisk and the griffin, but what about the basiffin? This fantastical flipbook collects together magical and mythical creatures from all over the world, then lets you mix and match their fronts and backs to create even more wondrous beasts of your own! From the wolpertinger

and nekomata to the thunderbird and the cockatrice, this mixed-up magical bestiary has over 1,000 possible creations to fascinate, bewitch, and beguile.

The power of the Realms depends on its dragons. With their terrifying natures tempered by a mysterious liquid, they are ridden by the aristocracy and bred for hunting and war. But as dangerous political maneuverings threaten the empire, a single dragon has gone missing. And even one dragon returned to its full intelligence and fury could spell disaster for the Realms...

Filled with practical, step-by-step instructions and clear explanations for the most important and useful tasks. This book will take a how-to approach, focusing on recipes that demonstrate Jsoup. If you are working in data scraping, data crawling, or within a similar area using Java, then this book is the one for you. This book acts as a fast-paced and simple guide to enhance your HTML data manipulating skills using one of the most well-known libraries, Jsoup.

Law, Magistracy, and Crime in Old Regime Paris, 1735-1789 is the first of two volumes centred around the two great courts of Paris, the Châtelet and Parlement, and their criminal defendants in the eighteenth century. Richard Andrews seeks to refute the 'black legend' of revolutionary propaganda and its modern historical successors, which hold that the Old Regime courts were cruel and arbitrary. These courts are shown rather to be thoroughly rule-bound and consisting of strict judicial procedure derived from royal statutes. Rule of and by the law is shown to be the most substantial legacy of the Old Regime. This volume places the courts of Old Regime Paris in the context of French society and the state. The practices and doctrines of punishment are examined, along with the jurisprudence of moral and criminal behaviour.

This book is about modeling as a principal component of scientific investigations. In general terms, modeling is the fundamental process of combining intellectual creativity with physical knowledge and mathematical techniques in order to learn the properties of the mechanisms underlying a physical phenomenon and make predictions. The book focuses on a specific class of models, namely, random field models and certain of their physical applications in the context of a stochastic data analysis and processing research program. The term application is considered here in the sense wherein the mathematical random field model is shaping, but is also being shaped by, its objects. Key Features \* This book explores the application of random field models and stochastic data processing to problems in hydrogeology, geostatistics, climate modeling, and oil reservoir engineering, among others Researchers in the geosciences who work with models of natural processes will find discussion of; \* Spatiotemporal random fields \* Space transformation \* Multidimensional estimation \* Simulation \* Sampling design \* Stochastic partial differential equations

Fusion offers a step-by-step, biblically grounded, tested, and proven plan for establishing a relationship with newcomers that ultimately prompts them to become fully developing members of our churches. This innovative, practical guide is full of how-to information, testimonials, examples, and self-assessment tools. Engaging, informative, and immediately applicable, here is help for setting newcomers on the path toward true life transformation and spiritual maturity.
