When developing more complex models it is often desirable to report a p-value for the model as a whole as well as an R-square for the model.. p-values for models. The p-value for a model determines the significance of the model compared with a null model. For a linear model, the null model is defined as the dependent variable being equal to its mean.

In R, you add lines to a plot in a very similar way to adding points, except that you use the lines() function to achieve this. But first, use a bit of R magic to create a trend line through the data, called a regression model. You use the lm() function to estimate a linear [...]

The R<sup>2</sup> value is a measure of how close our data are to the linear regression model. R<sup>2</sup> values are always between 0 and 1; numbers closer to 1 represent well-fitting models. R<sup>2</sup> always increases as more variables are included in the model, and so adjusted R<sup>2</sup> is included to account for the number of independent variables used to make the model ...

This handbook explores the challenges demographic change pose twenty-first century Japan. The first part gives the fundamental data involved, and the subsequent parts address the social, cultural, political, economic and social security aspects of Japan's demographic change.

For decades, poetry therapy has been formally recognized as a valuable form of treatment, and it has been proven effective worldwide with a diverse group of clients. The second edition of Poetry Therapy, written by a pioneer and leader in the field, updates the only integrated poetry therapy practice model with a host of contemporary issues, including the use of social media and slam/performance poetry. It 's a truly invaluable resource for any serious practitioner, educator, or researcher interested in poetry therapy, bibliotherapy, writing, and healing, or the broader area of creative/expressive arts therapies.

Children are at the heart of popular and public debates in North America and Europe about the culture of public space. On the one hand there is increased anxiety about children's vulnerability to stranger danger, on the other there is a rising tide of fear about out of control and dangerous youth. This book addresses both these debates about children's role in public space, setting them within an academic framework and drawing on a range of interdisciplinary work on childhood, young people and parenting. It is therefore relevant to practitioners and policy makers concerned with the nature and future of public space, and to academics researching or teaching about childhood, family or public space in the disciplines of sociology, social policy and geography.

Rural issues are currently attracting unprecedented levels of interest, with the debates surrounding the future of 'traditional' rural customs and practice becoming a significant political concern. However, the problem of racism in rural areas has been largely overlooked by academics, practitioners and researchers who have sought almost exclusively to develop an understanding of racism in urban contexts. This book aims to address this oversight by examining notions of ethnic identity, 'otherness' and racist victimisation that have tended to be marginalised from traditional rural discourse.

Biblio/Poetry Therapy The Interactive Process: A Handbook was first published in 1986. Now in its third printing, this is a classic text for those studying bibliotherapy: the use of literature in all its forms to promote mental health. The Hynes and Hynes-Berry four-stage bibliotherapy model is used by therapists, clinicians, educators, poets, and spiritual directors around the world."

The chapters make such theories more readily available to students and scholars of early childhood and show how they can be used to make sense of experience, in particular, becoming gendered in early childhood."--BOOK JACKET.

Achievement motivation is a personality variable that has been used to explain individual differences in a number of practical contexts: school, sports, and the world of work. The Achievement Motivation Inventory (AMI) is based on a trait-oriented concept of achievement motivation (Schuler & Prochaska, 2000, 2001). It was built on a new concept of how a wide variety of facets of achievement motivation are interrelated with each other. Many of the facets incorporated into the AMI are similar to traditional aspects of personality. In addition to the research applications in differential psychology and applied psychology, the major applications of the AMI are for personnel selection, personnel development, professional counseling in regards to job decisions, and psychology in sports.

How are firms, networks of firms, and production systems organized and how does this organization vary from place to place? What are the new geographies emerging from the need to create, access, and share knowledge, and sustain competitiveness? In what ways are local clusters and global exchange relations intertwined and co-constituted? What are the impacts of global changes in technology, demand, and competition on the organization of production, and how do these effects vary between communities, regions, and nations? This book synthesizes theories from across the social sciences with empirical research and case studies in order to answer these questions and to demonstrate how people and firms organize economic action and interaction across local, national, and global flows of knowledge and innovation. It is structured in four clear parts: - Part I: Foundations of Relational Thinking - Part II: Relational Clusters of Knowledge - Part III: Knowledge Circulation Across Territories - Part IV: Toward a Relational Economic Policy? The book employs a novel relational framework, which recognizes values, interpretative frameworks, and decision-making practices as subject to the contextuality of the social institutions that characterize the relationships between the human agents. It will be a valuable resource for academics, researchers, and graduate students across the social sciences, and practitioners in clusters policy.

The 2nd edition of this work has been completely rewritten to add new examples & to better integrate the presentation of topics. Readers will see how the choice of topic influences question wording & how the questions asked influence the analysis.
