A design strategy that involves challenging the way that things are done including the fundamental assumptions of an industry. This is typically based on first principles as opposed to the traditions associated with an area of design. For example, a designer of an electric bus who looks at the problem space as an issue of transporting passengers. From this perspective, the design need not look like a bus at all.

This example of design experiments is attributed to Harold Hotelling, building on examples from Frank Yates. The experiments designed in this example involve combinatorial designs. Weights of eight objects are measured using a pan balance and set of standard weights. Each weighing measures the weight difference between objects in the left pan and any objects in the right pan by adding calibrated weights to the lighter pan until the balance is in equilibrium.
