augment the user manuals that are supplied with each product but is complete enough to replace them. While this manual is Garmin specific it provides a basic understanding of gps devices that is applicable to any gps receiver. It was written over a period of 4 years and has been reviewed and tested by hundreds of users over that period. It has been used as the reference for training on gps usage. Because of its unique approach that develops the theory behind operation as well as specific details, it provides a basis that will allow a user to be able to use any gps receiver. Skills in the use of a gps will provide assurance and safety for the user. Topics extend beyond just operating the unit to actually being able to use it for navigation on the land, in the sea, or in the air. Topics are applicable whether you are hiking or driving to your destination. These topics include product operation, waypoints, routes, tracklogs, navigation, maps and databases, product selection, features, theory, accessories, and product unique functions.

Hunter Allen and Andy Coggan, PhD have completely revised the book that made power meters understandable for amateur and professional cyclists and triathletes. Power meters have become essential tools for competitive cyclists and triathletes. No training tool can unlock as much speed and endurance as a power meter--for those who understand how to interpret their data. A power meter displays and records exactly how much energy a cyclist expends, which lends unprecedented insight into that rider's abilities and fitness. With the proper baseline data, a cyclist can use a power meter to determine race strategy, pacing, and tactics. Training and Racing with a Power Meter makes it possible to exploit the incredible usefulness of the power meter by explaining how to profile strengths and weaknesses, measure fitness and fatigue, optimize workouts, time race readiness,

and race using power. This new edition: Enables athletes to predict future performance and time peak form Introduces fatigue profiling, a new testing method to pinpoint weaknesses Includes two training plans to raise functional threshold power and time peaks for race day Offers 75 power-based workouts tuned for specific training goals This updated edition also includes new case studies, a full chapter on triathlon training and racing, and improved 2-color charts and tables throughout. Training and Racing with a Power Meter, will continue to be the definitive guide to the most important training tool ever developed for endurance sports.

CLICK HERE to download the first chapter from Wilderness GPS * Simple, focused, and accessible, Wilderness GPS is for anyone using GPS in an outdoor setting * Trust us: first-timers need help to use their new backcountry GPS devices * From the authors of the bestselling Wilderness Navigation (65,000 copies sold) Thousands have learned compass and map skills with the help of father-and-son team Bob and Mike Burns and their straightforward, simply explained book, Wilderness Navigation. Now they've written a book for everyone who has bought a backcountry GPS device and found it inexplicably complicated to use (which includes most of us). Wilderness GPS is an easy-to-use guide to get you navigating the outdoors with your handheld GPS device. Wondering how to choose from the variety of gear and computer programs, or how to use a GPS with your map and compass effectively? Wilderness GPS details this and more including: * How to select your GPS gear * Getting started and practice routines * Different coordinate systems: latitude and longitude vs. Universal transverse Mercator (UTM) * Routefinding in wilderness settings, including common scenarios * GPS vs. map and compass routefinding * Using GPS on water * Using your GPS with a home computer or

mobile “smart” device Bob Burns and Mike Burns are the authors of *Wilderness Navigation*, a nationally bestselling primer that serves as the official textbook for navigation courses taught by The Mountaineers and other outdoor education centers. Together, they have decades of professional experience in teaching map and compass, GPS, and navigation in the outdoors and have hiked, scrambled, climbed, and snowshoed all over the West Coast and beyond. They both live in Seattle.

Dead-Reckoning aided with Doppler velocity measurement has been the most common method for underwater navigation for small vehicles. Unfortunately DR requires frequent position recalibrations and underwater vehicle navigation systems are limited to periodic position update when they surface. Finally standard Global Positioning System (GPS) receivers are unable to provide the rate or precision required when used on a small vessel. To overcome this, a low cost high rate motion measurement system for an Unmanned Surface Vehicle (USV) with underwater and oceanographic purposes is proposed. The proposed onboard system for the USV consists of an Inertial Measurement Unit (IMU) with accelerometers and rate gyros, a GPS receiver, a flux-gate compass, a roll and tilt sensor and an ADCP. Interfacing all the sensors proved rather challenging because of their different characteristics. The proposed data fusion technique integrates the sensors and develops an embeddable software package, using real time data fusion methods, for a USV to aid in navigation and control as well as controlling an onboard Acoustic Doppler Current Profiler (ADCP). While ADCPs non-intrusively measure water flow, the vessel motion needs to be removed to analyze the data

and the system developed provides the motion measurements and processing to accomplish this task.
