Information Revolution and Information Technology (IT), 2. Fundamentals of Computers, 3. Computer-Based Business Applications, 4. Electronic Data Interchange (EDI), 5. The Internet and its Basic Concepts, 6. Information System Audit.

According to New Syllabus of Various Universities, also very helpful for the students preparing for various competitive and professional examinations.

1. Introduction to Internet, 2. Internet Enabled Services, 3. Designing Web Site/Web Page, 4. Security of Data/Information, 5. Web Browsing, 6. Search Engine/Directories.

As technology continues to become more sophisticated, a computer's ability to understand, interpret, and manipulate natural language is also accelerating. Persistent research in the field of natural language processing enables an understanding of the world around us, in addition to opportunities for manmade computing to mirror natural language processes that have existed for centuries. *Natural Language Processing: Concepts, Methodologies, Tools, and Applications* is a vital reference source on the latest concepts, processes, and techniques for communication between computers and humans. Highlighting a range of topics such as machine learning, computational linguistics, and semantic analysis, this multi-volume book is ideally designed for computer engineers, computer and software developers, IT professionals, academicians, researchers, and upper-level students seeking current research on the latest trends in the field of natural language processing.

Alignment in Communication is a novel direction in communication research, which focuses on interactive adaptation processes assumed to be more or less automatic in humans. It offers an alternative to established theories of human communication and also has important implications for human-machine interaction. A collection of articles by international researchers in linguistics, psychology, artificial intelligence, and social robotics, this book provides evidence on why such alignment occurs and the role it plays in communication. Complemented by a discussion of methodologies and explanatory frameworks from dialogue theory, it presents cornerstones of an emerging new theory of communication. The ultimate purpose is to extend our knowledge about human communication, as well as creating a foundation for natural multimodal dialogue in human-machine interaction. Its cross-disciplinary nature makes the book a useful reference for cognitive scientists, linguists, psychologists, and language philosophers, as well as engineers developing conversational agents and social robots.

This contributed volume discusses in detail the process of construction of a WordNet of 18 Indian languages, called "Indradhanush" (rainbow) in Hindi. It delves into the major challenges involved in developing a WordNet in a multilingual country like India, where the information spread across the languages needs utmost care in processing, synchronization and representation. The project has emerged from the need of millions of people to have access to relevant content in their native languages, and it provides a common interface for information sharing and reuse across the Indian languages. The chapters discuss important methods and strategies of language computation, language data processing, lexical selection and management, and language-specific synset collection and representation, which are of utmost value for the development of a WordNet in any language. The volume overall gives a clear picture of how WordNet is developed in Indian languages and how this can be utilized in similar projects for other languages. It includes illustrations, tables, flowcharts, and diagrams for easy comprehension. This volume is of interest to researchers working in the areas of language processing, machine translation, word sense disambiguation, culture studies, language corpus generation, language teaching, dictionary compilation, lexicographic queries, cross-lingual knowledge sharing, e-governance, and many other areas of linguistics and language technology.

This book constitutes the thoroughly refereed post-conference proceedings of the Second International Conference on Data Engineering and Management, ICDEM 2010, held in Tiruchirappalli, India, in July 2010. The 46 revised full papers presented together with 1 keynote paper and 2 tutorial papers were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on Digital Library; Knowledge and Mulsemedia; Data Management and Knowledge Extraction; Natural Language Processing; Workshop on Data Mining with Graphs and Matrices.
