How will the King of Vampires adapt to the social and technological changes brought by the twenty-first century? Could the Count's condition be cured by modern medicine? How does the mythology perpetuated by literature and movies affect the existence of a real bloodsucker? What if Dracula found himself ruler of a world controlled by vampires? Or perhaps political and ecological catastrophe will result in the Count's final destruction? This tribute to the world's greatest vampire collects together more than 200,000 words of Dracula fiction by masters of dark fantasy such as: Hugh B. Cave, R. Chetwynd-Hayes, Basil Copper, John Gordon, Brian Hodge, Nancy Holder, Nancy Kilpatrick, Roberta Lannes, Thomas Ligotti, Paul J. McAuley, Nicholas Royle, Guy N. Smith and many more. It also includes a brand new story from Charlaine Harris.

#1 NEW YORK TIMES BESTSELLER When and how did the universe begin? Why are we here? What is the nature of reality? Is the apparent “grand design” of our universe evidence of a benevolent creator who set things in motion—or does science offer another explanation? In this startling and lavishly illustrated book, Stephen Hawking and Leonard Mlodinow present the most recent scientific thinking about these and other abiding mysteries of the universe, in nontechnical language marked by brilliance and simplicity. According to quantum theory, the cosmos does not have just a single existence or history. The authors explain that we ourselves are the product of quantum fluctuations in the early universe, and show how quantum theory predicts the “multiverse”—the idea that ours is just one of many universes that appeared spontaneously out of nothing, each with different laws of nature. They conclude with a riveting assessment of M-theory, an explanation of the laws

governing our universe that is currently the only viable candidate for a “ theory of everything ” : the unified theory that Einstein was looking for, which, if confirmed, would represent the ultimate triumph of human reason.

A breakout bestseller in Italy, now available for American readers for the first time, *Genesis: The Story of How Everything Began* is a short, humanistic tour of the origins of the universe, earth, and life—drawing on the latest discoveries in physics to explain the seven most significant moments in the creation of the cosmos. Curiosity and wonderment about the origins of the universe are at the heart of our experience of the world. From Hesiod ’ s *Chaos*, described in his poem about the origins of the Greek gods, *Theogony*, to today ’ s mind-bending theories of the multiverse, humans have been consumed by the relentless pursuit of an answer to one awe inspiring question: What exactly happened during those first moments? Guido Tonelli, the acclaimed, award-winning particle physicist and a central figure in the discovery of the Higgs boson (the “ God particle ”), reveals the extraordinary story of our genesis—from the origins of the universe, to the emergence of life on Earth, to the birth of human language with its power to describe the world. Evoking the seven days of biblical creation, Tonelli takes us on a brisk, lively tour through the evolution of our cosmos and considers the incredible challenges scientists face in exploring its mysteries. *Genesis* both explains the fundamental physics of our universe and marvels at the profound wonder of our existence.

In the last five years, *Simon's Cat* has become a national treasure and a global phenomenon. Star of over twenty-five films, which have been watched over 350 million times, and winner of a dozen major industry awards, *Simon's Cat* has captured the hearts of a global audience. In this ebook edition author, animator and illustrator Simon Tofield brings together the best cartoons from the first three bestselling books, with exclusive new material and a unique 'How to Draw' section. This really is *The Bumper Book of Simon's Cat*.
