Erlang is also strongly typed. A weakly typed language would do implicit type conversions between terms. If Erlang were to be weakly typed we could possibly do the operation `6 = 5 + "1"`. While in practice, an exception for bad arguments will be thrown: `1> 6 + "1". ** exception error: bad argument in an arithmetic expression in operator +/2 called as 6 + "1"`

Don't Drink Too Much Kool-Aid: You may notice that while we can't update the key 1.0 of a map with the key 1, it is possible to have them both compare as equal that way! This is one of the long-standing warts of Erlang. While it's very convenient to have all numbers compare equal from time to time, for example, when sorting lists so that 1.0 isn't greater than 9121, this creates confusing ...

Let's imagine for a moment that we have some Erlang software running on a server. Our software has a few kitty servers running, a veterinary process (you send your broken kitties and it returns them fixed), a kitty beauty salon, a server for pet food, supplies, etc. Most of these can be implemented with a client-server pattern.

The Erlang shell has a built-in line editor based on a subset of Emacs, a popular text editor that's been in use since the 70s. If you know Emacs, you should be fine. For the others, you'll do fine anyway. First of all, if you type some text and then go ^A (Ctrl+A), you should see your cursor moving to the beginning of the line.
