Before we move on to the amazing, unique looks of the car, we need to talk about the performance and the engine. The Kizashi comes with a 2.4 L petrol engine that can churn out a mind blowing 178 bhp ...

Oil Pollution Laws and Environmental Justice
This book explores the relationship between oil pollution laws and environmental justice by comparing and contrasting the United States and Nigeria. Critically, this book not only examines the fluidity of oil pollutions laws but also how effective or ineffective enforcement can be when viewed through the lens of environmental justice. Using Nigeria as a case study and drawing upon examples from the United States, it examines the legal and institutional challenges impacting upon the effective enforcement of laws and provides a contrasting view of developed and developing countries. Focusing on the oil and gas industry, the book discusses the laws and international acceptable standards (IAS) in these industries, the principles behind their application, the existing barriers to their effective implementation, and how to overcome those barriers. Utilising an environmental justice framework, the book demonstrates the synergy between policy-making, human rights, and justice in oil-producing regions as well as addressing the importance of protecting the rights of minorities. Through a comparative analysis of the United States and Nigeria, this book draws out enforcement approaches and mechanisms for tackling oil-related pollution with a view to reducing environmental injustice in developing countries. Examining the role of NGOs in pursuing environmental justice matters, the book showed the regional courts as one avenue of overcoming the enforcement challenges faced by the developing countries. This book will be of great interest to students and scholars of environmental law, environmental justice, minorities' rights, business and human rights, energy law, and natural resource governance.

Energy Systems in the Era of Energy Vectors
What lies beyond the era of fossil fuels? While most answers focus on different primary energy resources, Energy Systems in the Era of Energy Vectors provides a completely new approach. Instead of providing a traditional consumption analysis of classical primary energy resources such as oil, coal, nuclear power and gas, Energy Systems in the Era of Energy Vectors describes and assesses energy technologies, markets and future strategies, focusing on their capacity to produce, exchange, and use energy vectors. Special attention is given to the renewable energy resources available in different areas of the world and made exploitable by the integration of energy vectors in the global energy system. Clear definitions of energy vectors and energy systems are used as the basis for a complete explanation and assessment of up-to-date, available technologies for energy resources, transport and storage systems, conversion and use. The energy vectors scheme allows the potential realization of a worldwide sustainable energy system to fulfill global development expectations by minimizing both the impact on the environment, and the international political frictions for access to limited and concentrated resources. Energy Systems in the Era of Energy Vectors is an informative read for researchers and advanced students in industrial, energy and environmental engineering. It also contains valuable information for managers and technicians working in the energy sector.

Personalized Journal Notebook: An Awesome Gift

The Panzer War
This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Dodging the Toxic Bullet
presents workable strategies that show how we can live longer, healthier lives by breathing clean air, eating healthy food, drinking safe water, and using non-toxic products. Author David R. Boyd provides accessible background on a range of hazards including mercury in fish, carcinogens in cleaning products, lead in toys, and lethal E. coli in ground beef. His clear directions for reducing risk include growing lots of houseplants, choosing whole foods, avoiding consumer products with strong or long-lasting smells, and using green cleaning products. Easy-to-follow advice and informative sidebars and checklists make this a must-have guide, especially for parents of infants and children.

Coatings for Engineers
Now in its second edition and still the only book of its kind, this is an authoritative treatment of all stages of the coating process -- from body materials, paint shop design, and pre-treatment, through primer surfacers and top coats. New topics of interest covered are color control, specification and testing of coatings, as well as quality and supply concepts, while valuable information on capital and legislation aspects is given. Invaluable for engineers in the automotive and paints and coatings industry as well as for students in the field.

Automated Vehicle Policy
*A Vision for Safety replaces the Federal Automated Vehicle Policy released in 2016. This updated policy framework offers a path forward for the safe deployment of automated vehicles by: encouraging new entrants and ideas that deliver safer vehicles; making Department regulatory processes more nimble to help match the pace of private sector innovation; and supporting industry innovation and encouraging open communication with the public and with stakeholders. --Introductory message.

The Sunshine Car
?no business like the car business? Within months of its launch in late 1998, with every well-known global automobile brand jockeying for a foothold in a small-car market almost monopolized by Maruti Udyog Limited, Hyundai Motor India?s debut production, the Santro, emerged as a force to reckon with. The first car to be conceptualized and designed for ? and then developed and manufactured in ? India, the 'Sunshine Car' has, over a period of sixteen years, set the record for the quickest small car brand to go from zero to one million units sold. It achieved profitability for Hyundai at an unprecedented speed and made an impressive global impact as a made-in-India automobile in markets as diverse as Algeria and Zimbabwe, Western Europe and North America. In Santro: The Car That Built a Company, BVR Subbu, who spearheaded much of the Santro?s success, reveals the hitherto untold story of how this small car made such a big impact. Vivid anecdotes detail the challenges of introducing a new product in a new market, the canny business strategies that were employed to get the better of rival brands, the unforgettable marketing campaigns that made all the difference ? and the thrills of the high-stakes power battles and everyday drama that characterize corporate India. By turns revelatory, insightful and delightfully engaging, this is a business story with a difference about a car like no other.

Metaphor and Sustainability
This book offers an edictic range of transdisciplinary insights into the role of metaphor, myth and fable in shaping our understanding of the world and how we interact with it and with each other. Drawing on innovative perspectives from widely different fields, this book explores how metaphor might facilitate and underpin transformative change towards environmental, ecological and societal sustainability. It illustrates the ways in which contemporary metaphors lock us into patterns of thinking, modes of behaviour, and styles of living that reproduce and accentuate our current socio-environmental problems. It sets itself the task of finding new metaphors and myths that might help move us towards sustainability as societal flourishing. By examining the use of metaphor in diverse fields such as energy use, the food system, health care, arts and the humanities, it invites the reader to reflect on the deep-seated influence of language in general, and metaphor in particular, in shaping how we understand and act upon the world. Re-imagining the use of language in framing both the problems we face and the solutions we devise, this novel contribution is a vital source of ideas for those aiming to change how we think and act in pursuit of more sustainable futures.
